Comprehensive Sexuality Education

Education for a healthy future
What is comprehensive sexuality education?

Comprehensive sexuality education (CSE) is a curriculum-based process of teaching and learning about the cognitive, emotional, physical, and social aspects of sexuality. It aims to equip children and young people with knowledge, skills, attitudes, and values that will empower them to realize their health, well-being and dignity; develop respectful social and sexual relationships; consider how their choices affect their own well-being and that of others; and understand and ensure the protection of their rights throughout their lives.

CSE should be culturally relevant and adapted to the national context, scientifically accurate, non-judgmental, age- and developmentally-appropriate, and complete, and should be provided in a carefully phased process from an early age. In addition, research has shown that CSE is most effective when it is based on gender equality and a human rights approach, and if it is able to develop skills for healthy living.1

“What young people are receiving confusing and conflicting messages about relationships, about sex, and about gender. It’s critical that schools deliver scientifically accurate education that develops the skills, knowledge, attitudes, and competencies needed to navigate a healthy transition to adulthood. Government and the education sector in sub-Saharan Africa have both an opportunity and an urgent responsibility to scale up sexuality education programmes.”

(Former) Minister of General Education, Dr Dennis Wachinga – Zambia, January 2018

What does ‘comprehensive’ mean?

“Comprehensive” refers to the breadth and depth of topics related to sexuality, including sexual and reproductive anatomy and physiology, puberty and menstruation, reproduction, modern contraception, pregnancy and childbirth, and HIV and other sexually transmitted infections (STIs). This content is consistently delivered to learners over time, throughout their education, rather than a one-off lesson or intervention.
What CSE content is recommended?

CSE provides children and young people with an age-appropriate and phased education on eight key concepts and essential topics. It emphasizes values such as respect, inclusion, non-discrimination, equality, empathy, responsibility and reciprocity.

Key concept 1: Relationships

Topics: 1.1 Families 1.2 Friendship, love and romantic relationships 1.3 Tolerance, inclusion and respect 1.4 Long-term commitments, and parenting

Key concept 2: Values, rights, culture and sexuality

Topics: 2.1 Values and sexuality 2.2 Human rights and sexuality 2.3 Culture, society and sexuality

Key concept 3: Understanding gender

Topics: 3.1 The social construction of gender and gender norms 3.2 Gender equality, stereotypes and bias 3.3 Gender-based violence

Key concept 4: Violence and staying safe

Topics: 4.1 Violence 4.2 Consent, privacy and bodily integrity 4.3 Safe use of information and communication technologies (ICT’s)

Key concept 5: Skills for health and well-being

Topics: 5.1 Norms and peer influence on sexual behaviour 5.2 Decision-making 5.3 Communication, refusal and negotiation skills 5.4 Media literacy and sexuality 5.5 Finding help and support

Key concept 6: The human body and development

Topics: 6.1 Sexual and reproductive anatomy and physiology 6.2 Reproduction 6.3 Puberty 6.4 Body image

Key concept 7: Sex, sexuality and the sexual life cycle

Topics: 7.1 Sex, sexuality and the sexual life cycle 7.2 Sexual behaviour and sexual response

Key concept 8: Sexual and reproductive health

Topics: 8.1 Pregnancy and pregnancy prevention 8.2 HIV and AIDS stigma, care, treatment and support 8.3 Understanding, recognizing and reducing the risk of STIs, including HIV

“Saw the need to get more involved in teaching comprehensive sexuality education because of the way our society hides information on sexuality. I remember growing up and being told that if you sit next to a boy at school you would conceive. I don't want the current generation to go through what we went through.”

- Agather Shindende, a teacher at Kabulonga Primary School

What is CSE called in the different African countries?

While research has identified CSE’s essential content, it is up to each country to adapt it to the local context, in line with national laws and policies. Different components of CSE have been taught in nearly all sub-Saharan countries for decades through various programmes often referred to as Life Skills Education (LSE) or prevention education. CSE builds on these existing programmes, increasing their effectiveness and relevance. While CSE is now a globally recognized term used for ease of reference, the terminology or name used by each country varies for example:

Guidance and Counselling LSE Curriculum, Swaziland

Educação Sexual Compreensiva, Mozambique

L’éducation à la vie familiale, Democratic Republic of the Congo

Family Life and HIV Education, Nigeria

Éducation à la santé de la reproduction, Senegal

Life Skills, Sexuality, HIV and AIDS Education, Zimbabwe

Comprehensive sexuality education, Zambia

Education sexuelle complète, Ivory Coast/Togo

Education sexuelle intégrée, Cameroon

“It used to hurt me whenever a girl passed better than me in any subject. Now, after learning some topics in CSE on gender, I have come to appreciate that we are actually the same and now I do get help from girls in some subjects and they too get help from me and it doesn’t hurt me anymore.”

- Remmy Kasangili Grade 9, Jacaranda Primary School
Myths and misconceptions

CSE hastens sexual behaviour
CSE increases sexual behaviour
CSE increases sexual risk-taking behaviour
CSE increases STI/HIV infection rates

NO
International research has shown CSE:
• delays initiation of sexual activity
• increases use of condoms and other contraceptives
• increases knowledge
• decreases number of sexual partners
• decreases frequency of sexual intercourse
• decreases risk taking
• decreases frequency of unprotected sex

CSE teaches homosexuality

NO
CSE does not promote homosexuality or endorse or campaign for any particular lifestyle, other than promoting quality education, health, and well-being for all. CSE is in line with agreements signed by UN member states which reiterate that all people, regardless of age, sexual orientation, or gender identity, should have equal access to the highest attainable standard of health, including education, health services, and accurate SRH information – without discrimination.

CSE teaches that traditional masculine and feminine natures are harmful

NO
CSE does not state that traditional masculine and feminine natures are harmful. CSE does promote reflection and understanding of gender norms and stereotypes and critical thinking skills on how these shape our attitudes and behaviours, some of which are harmful to ourselves and others.

CSE teaches how to masturbate or other sexual practices

NO
CSE does not teach how to masturbate or other sexual practices. CSE does help young people to understand and manage their risk in relation to sex, including non-penetrative sex.

CSE promotes abortion

NO
Technical guidance on CSE only notes that young people should have access to full information about comprehensive SRH services. In countries where abortion is legal this should include information on abortion and post-abortion care. The inclusion of information on abortion is therefore dependent on national contexts.

CSE covers content that is not age-appropriate

NO
CSE content is always adapted to the age and developmental stage of the learner.

SRH and rights (SRHR) give children the right to do as they please with regard to sex

NO
SRHR cover the rights to health, education, to be protected from violence and abuse, to access information, to bodily integrity, and the need for consent.

CSE goes against a countries’ laws and policies

NO
CSE is adapted to national contexts by curriculum developers and national stakeholders, in line with national laws and policies.

Abstinence-only programmes are sufficient

NO
Research has shown that abstinence-only programmes are insufficient. However, abstinence is a key element of CSE which needs to be combined with a focus on delaying sexual activity, and with content about condoms and other forms of contraception.

CSE destroys family values

NO
CSE does not destroy family values, it develops values such as respect, responsibility, and reciprocity, and emphasizes the importance of healthy relationships and family.
What are the effects of CSE? 

**INCREASES**
- Age of first sex
- Use of condoms & other contraceptives
- Knowledge and self-esteem

**REDUCES**
- Unprotected sex
- Number of sexual partners
- Frequency of sexual intercourse
- Risk taking

**Changes negative attitudes and norms**

*CSE also contributes to changes beyond health outcomes, including:*
- preventing and reducing gender-based and intimate partner violence;
- reducing discrimination;
- increasing gender equitable norms;
- increasing self-efficacy and confidence;
- building stronger and healthier relationships;
- and improving educational outcomes.

“It is the responsibility of religious institutions to educate adolescents and young children on issues of comprehensive sexuality education, now we have UNESCO and other partners supporting us in advancing our work, and we are grateful”

– Bishop Michael Akpami, Secretary of CAN
Why do young people need CSE?

158 million young people aged 15-24 in sub-Saharan Africa (expected to rise to 281 million by 2050)

New HIV infections among young people in 2016
- Eastern and Southern Africa: 210,000 female and 94,000 male
- West and Central Africa: 80,000 female and 47,000 male

Comprehensive knowledge of HIV
- Eastern and Southern Africa: 35% female and 36% male
- West and Central Africa: 20% female and 26% male

5-25% of adolescent girls have sexual intercourse before the age of 15.

12% of adolescent girls aged 15-19 have given birth (global average 5%).

Maternal mortality is the leading cause of death among girls aged 15-19 globally.

The African region will only reap the benefits from the demographic dividend if young people are educated, healthy and employed.

Too many young people receive confusing and conflicting information about relationships and sex as they make the transition from childhood to adulthood. This has led to an increasing demand from young people for reliable information which prepares them for a safe, productive, and fulfilling life.

CSE responds to this demand, empowering young people to make informed decisions about relationships and sexuality and navigate a world where gender-based violence, gender inequality, harmful norms, negative notions of masculinities, early and unintended pregnancies, and HIV and other STIs still pose serious risks to their health and well-being.

I want to think that CSE/Life Skills-based Sexuality Education (LSBSE) is a single stride in the right direction in preventing early and unintended pregnancy.

- High school life skills teacher, Lesotho
Are African governments supportive of CSE?

As a result of the high rates of new HIV infections, early marriage, early initiation of sexual activity, and early and unintended pregnancies, many African governments are highly supportive of CSE. CSE and access to, and usage of, adolescent- and youth-friendly SRH services are recognized as key interventions to improve the health and well-being of young people and enable countries to reap the benefits of a demographic dividend. To show their commitment, governments have signed up to a number of regional commitments and standards that directly advocate for, or require CSE and adolescent- and youth-friendly SRH services to be implemented.

| International Conference on Population and Development (ICPD) Resolution 2012/1 Adolescents and youth The Commission on Population and Development (2012) | Calls upon governments “…to give full attention to meeting the reproductive health-service, information and education needs of young people …and to provide them with evidence-based comprehensive education on human sexuality, SRH, human rights, and gender equality to enable them to deal in a positive and responsible way with their sexuality.” |

UNESCO is the United Nations’ specialized agency for education. It provides global and regional leadership in education, strengthens national education systems, and responds to contemporary global challenges through education, with a special focus on gender equality and Africa.

UNESCO’s mission on the area of health education

- Promoting healthy lifestyles among girls, boys, young women, and men through skills-based education in formal educational settings, non-formal educational activities, and informal education.
- Ensuring that all children benefit from good quality comprehensive sexuality education that includes information on HIV prevention.
- Ensuring that all children and young people have access to safe, inclusive, health-promoting learning environments.

2 CSE, its effects, and promising implementation practices are well researched subjects. Two main evidence reviews exist: The 2008 review was based on 87 studies; the 2016 review on 22 rigorous systematic reviews, 77 randomized controlled trials (RCT), of which more than half were situated in low or middle income countries, and information from non-RCT publications and online resources (40 studies were conducted in African countries). For further details see UNESCO. 2018. Revised Edition. International technical guidance on sexuality education. An Evidence-informed approach.
